### INSTALLATION

## Specification Check

Before installation,

Bike Frame: BB86

Twist-Fit Type Inner Diameter: 41mm Width: 86mm

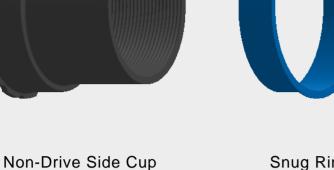

Crank Spec: ROTOR 3D+:

Ø30mm

### BB BB86 Anatomy Before installation,

please ensure that the purchased BB meets the following specifications and includes the following contents.

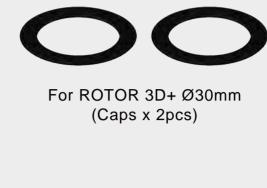

Snug Ring (For Drive Side)

Drive Side Cup

Non-Drive Side Bearing Seal (Cap x 1pc)

ETERNA LV Fluid

# General Safety

- To install TRiPEAK Bottom Bracket, we strongly recommend that you have a trained bicycle mechanic at your local bike shop.
- Any modifications to this product will void the warranty.

Do not alter this product in any way as it can cause unseen damage.

Improperly attached cranks can become detached from the BB set.

Make sure the crankset is firmly attached to the bottom bracket,

Never use high-pressure water jet, It will cause BB cup internal water ingress and influencing the bearing rolling lifetime.

When cleaning the bottom bracket set, only use mild soap and water.

If you have any questions or concerns about this product, Please feel free to contact us. E-mail:info@tripeakbearing.com

gently by hand to ensure the lubricant is evenly distributed. Carefully press the seals back into place on the bearings, ensuring they are seated properly and

Use the included TRIPEAK ETERNA LV Fluid to Add a full lap of bearings. Rotate the bearings

(BB) installation. Clean the inside of the BB shell on the frame, ensuring it is smooth and free of debris. Apply a thin layer of grease to the inner edges of the BB shell to assist with smooth BB installation.

Ensure that the internal cable routing of the frame will not interfere with the bottom bracket

gap between the BB and the frame.

Remove the drive-side BB, which will be installed later.

During pressing, ensure the BB is inserted at a proper vertical angle to the frame. If you encounter excessive resistance while pressing, stop the process and recheck the insertion angle and the BB shell for any debris or deformation.

Align the drive-side BB along with the Snug Ring vertically with the inside of the drive-side BB

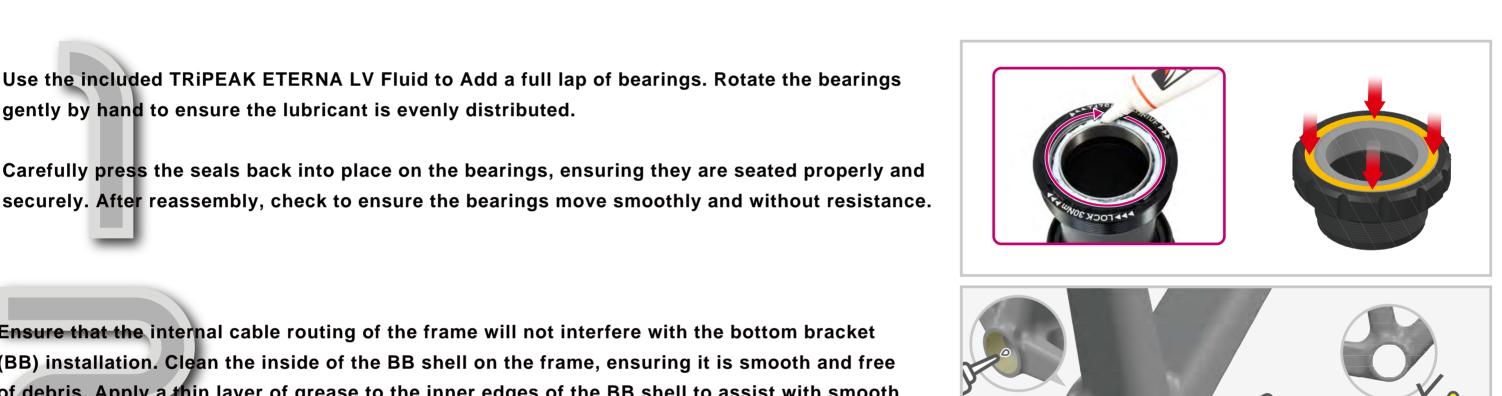

shell on the frame, and rotate it counterclockwise to insert. Then, use the BB wrench (B015) to

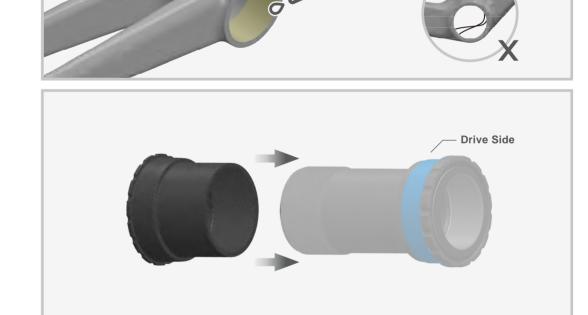

Gently position the non-drive side BB into the non-drive side of the BB shell. Using a dedicated

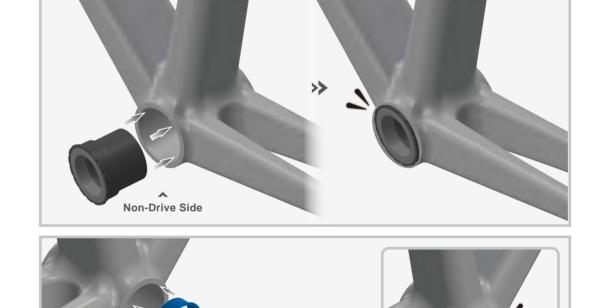

BB installation tool, press the non-drive side BB into the BB shell of the frame until there is no

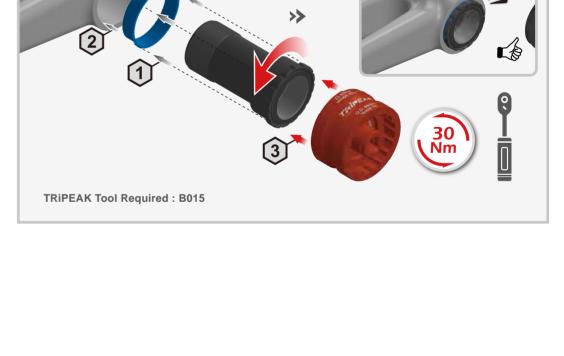

fit the drive-side BB, continuing to rotate counterclockwise to press it in. Tighten to a torque value of 30Nm, ensuring there is no gap between the BB and the frame's BB shell, completing the BB installation. If the non-drive side BB rotates along with the drive-side BB during installation, prepare another BB wrench (B015) to secure the non-drive side BB in place, ensuring the required torque value is reached.

Bottom Bracket Maintenance

### For maintaining and servicing TRiPEAK bottom brackets, we strongly recommend hiring a trained bicycle mechanic at your local bike shop.

Reapply lubricant to Bottom Bracket

temperatures, etc.), it is advised to perform maintenance immediately after riding.

5,000-10,000 km. If riding in harsh conditions (wet, dusty, extreme

Regular maintenance is generally recommended after riding

Avoid repeated disassembly and reassembly of the BB Cup unless necessary, as maintenance should only focus on the BB bearings to prevent damage to the frame.

◆ Do not use high-pressure water jets to clean the BB to avoid water

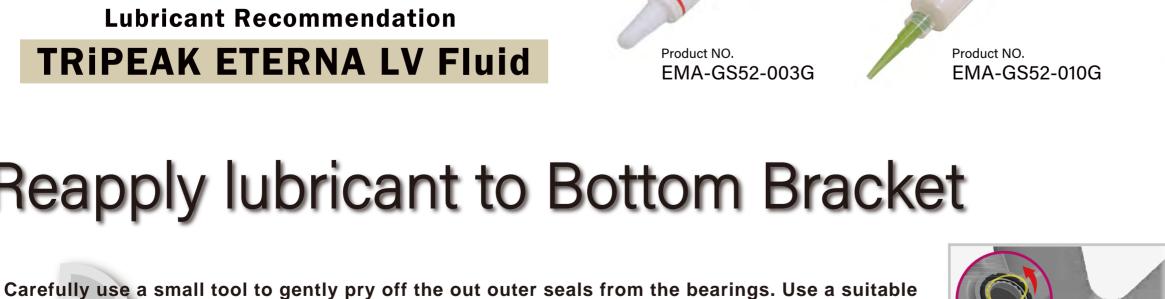

Regularly check the torque value of the BB Cup, and do not ride with a loose BB Cup.

infiltration and bearing damage.
